PROFESSIONAL SUMMARY

Software Test Engineer with 3.8 years of experience in Selenium and Java-based test automation, with strong skills in Playwright, API testing, and manual testing across web, mobile, and API applications. Built a Selenium automation suite from scratch for an omnichannel order processing system, working closely with developers throughout. Experienced in full STLC/SDLC execution, CI/CD integration via Jenkins, and Agile/Scrum delivery, with a track record of cutting regression cycle time by up to 65%.

CORE COMPETENCIES

- 3.8 Years QA Automation Expertise
- Selenium WebDriver & Playwright
- Hybrid, Data-Driven & Keyword-Driven Frameworks
- Cucumber BDD Framework
- API Testing (Postman, REST Assured)
- Java, TestNG & Page Object Model
- Extent Reports — Generation & Analysis
- CI/CD Integration via Jenkins
- Agile & Scrum Methodologies
- Mobile Testing with Appium

TECHNICAL SKILLS

Testing Types: Manual, Functional, Regression, Smoke, Sanity, Integration, System, End-to-End, UI, Mobile Testing

Manual Testing Process: STLC, SDLC, Test Case Design, Test Scenarios, Test Execution, Defect Lifecycle, UAT, Exploratory Testing, Requirement Analysis

Automation Frameworks: Hybrid, Data-Driven, Keyword-Driven, Page Object Model (POM), Cucumber BDD

Automation Tools: Selenium WebDriver, Playwright, TestNG, Mocha, Appium

Reporting & Analysis: Extent Reports (Generation & Analysis), TestNG Reports

Selenium Concepts: XPath, CSS Selectors, Explicit/Implicit/Fluent Waits, Actions Class, JavaScriptExecutor, Frames, Alerts, Dynamic Web Elements

Programming: Java (OOPs, Collections, Exception Handling, Interfaces, Inheritance, Polymorphism), JavaScript, SQL

API Testing: Postman, REST Assured, JSON, HTTP Methods, Status Codes, Headers, Authentication, Bearer Token

CI/CD & Version Control: Jenkins, GitHub Actions, Git, Maven

Project Tools: JIRA, Agile, Scrum

Familiar With (Basic Exposure): Cypress, Chai

PROFESSIONAL EXPERIENCE

Software Test Engineer | Revalsys Technologies

March 2024 – July 2026 — Hyderabad, India

Projects: Fossil India & Watch Station India — E-Commerce

- Built a Selenium automation suite from scratch for the omnichannel order processing flow, coordinating with developers to align test coverage with system behavior.
- Performed manual, functional, regression, integration, and smoke testing for high-traffic e-commerce web applications.
- Designed test scenarios for checkout flows, cart states, payment gateway integrations, and order-management lifecycles.

- Developed Hybrid and Data-Driven automation frameworks using Selenium, Java, TestNG, and POM, with test data managed through Excel/Properties — cut deployment validation time by 65%.
- Executed API testing using Postman and REST Assured, validating request parameters, payloads, and status codes across 50+ endpoints.
- Applied SQL knowledge to cross-check order records during backend and API validation.
- Logged and tracked defects through JIRA while collaborating with developers, product owners, and stakeholders across Agile sprints to speed up debugging and align coverage with requirements.
- Generated and analyzed Extent Reports for test execution visibility; integrated automated regression packs into Jenkins CI/CD pipelines.

Project: Remittance Transaction System — Retail & Logistics / Supply Chain

- Executed API testing and end-to-end workflows for store-to-warehouse remittance reconciliation tracking, validating store-submitted files against warehouse intake receipts.
- Identified calculation anomalies and discrepancy patterns to safeguard financial accuracy prior to inventory updates.

Project: Reval Retail Application — Mobile Administration

- Maintained mobile automation scripts for Android apps using Appium; performed manual functional and cross-device compatibility testing across multiple hardware profiles and OS versions.

Junior QA Engineer | Enhopes Solution Private Limited

October 2022 – March 2024 — Hyderabad, India

Project: Decathlon Web Platform — Retail

- Collaborated with product managers and developers in Agile Scrum ceremonies for requirement analysis and sprint test planning.
- Built front-end automated UI scripts using Playwright and Mocha with JavaScript to accelerate cross-browser regression testing; gained working exposure to Cypress.
- Conducted daily exploratory testing and manual test case design across 15 sprint release cycles, isolating edge-case frontend and layout bugs.
- Optimized automation execution speed, cutting the regression cycle from 3 days to 6 hours while maintaining consistent release quality.

TEST AUTOMATION PROJECTS (GITHUB PORTFOLIO)

- Hybrid & Data-Driven Automation Framework — POM-based framework with external Excel/Property data providers for reusable, parameterized test runs. Tech: Java, Selenium, TestNG, Maven, Jenkins.
- Keyword-Driven & BDD Framework — Modular architecture mapping action keywords to test steps with Cucumber BDD feature files. Tech: Selenium, Cucumber, Gherkin, TestNG.
- API Automation Framework — Backend suite for HTTP method validation, API chaining, and payload verification. Tech: REST Assured, Postman, JSON.
- JavaScript UI Test Suite — Cross-browser assertion handling using Mocha and Playwright; basic Cypress exposure. Tech: Mocha, Chai, Playwright, Node.js.

EDUCATION

Bachelor of Science (B.Sc.) — Mathematics, Physics, Computer Science (MPCS)

Aurora Degree and PG College, Hyderabad, India — 2020

PROFESSIONAL TRAINING

Comprehensive coaching in Software Testing, Advanced Automation Framework Design (Hybrid/Data-Driven), and complete STLC methodologies.
